VITAL STATISTICS OF CALIFORNIA

1984

George Deukmejian
Governor
State of California

THE VITAL STATISTICS SYSTEM IN CALIFORNIA

STATE REGISTRAR: DIRECTOR OF CALIFORNIA STATE DEPARTMENT OF HEALTH SERVICES

OFFICE OF STATE REGISTRAR: The State Registrar's functions are performed by the Office of State Registrar, which:

- Maintains a permanent public record of each birth, death, marriage, and marriage dissolution which has occurred in California since 1905.
- Provides certified copies of California vital records or searches the permanent central registry to verify the occurrence of vital events in California.
- Prepares and maintains computer files of state birth, death, marriage, and divorce data and monitors these files for data quality.
- Offers tables and computer tapes from the state vital statistics files to public and private organizations and to individuals requesting the data for research and planning and provides consultation to the users of these data.
- Prepares and periodically publishes statistical analyses and summaries of vital statistics for use by the Department of Health Services, other agencies, and the public. The data are used in medical and social sciences, public health and health demographics, human services planning, population estimation and projection, and economic forecasting.
- Builds and continues cooperative relationships with federal, state, and local agencies including the National Center for Health Statistics, which collect, maintain, and use vital records/statistics.
- Develops forms, standards, and guidelines for registration of all vital events occurring in the State of California.
- Directs and monitors the state-delegated functions of approximately 180 local offices which register California's vital events in order to assure statewide compliance with the statutory mandate for uniform application of registration laws, policies, and procedures.

PREFACE

The purpose of this annual vital statistics report is to present information which can be used as a basis for health policy decisions, planning, and epidemiologic research; it is also designed to provide California's governmental agencies, businesses, industries, and citizens with information on the vital statistics of their State.

The sources of the data included in this report are certificates of live birth, death, and fetal death which occurred during 1984 and which were registered with the Department of Health Services. Data on marriages, legal separations, judgments of nullity, and dissolutions of marriage are not included in this report. These data will be made available as they are released from the Office of State Registrar.

Chapter 6, entitled "Sources, Quality, and Limitations of Data," gives information needed for correct interpretation and analysis of the data, and provides a description of the vital statistics registration system in California. Chapter 7 includes definitions used to calculate the rates and ratios used throughout the report.

NOTE: Population data used as denominators for calculating rates of vital events in this publication were prepared by the Population Research Unit of the California Department of Finance. For the reader's convenience, this publication provides state and county populations so that rates can be calculated when desired.

Vital rates in this publication with population as a denominator were calculated using the latest population data available. Consequently, these rates may differ from previously published rates.

HIGHLIGHTS

POPULATION	California's population reached an estimated 25,622,000 persons in 1984. The population density grew from 128.0 persons per square mile of land area in 1970 to 163.6 persons in 1984.
LIVE BIRTHS	In 1984, there were 447,394 resident live births in California, the highest number ever recorded in the State. This marked the eleventh straight year of increases and was 2.7 percent above the 1983 total (435,722). California's 1984 crude birth rate of 17.5 live births per 1,000 population rose slightly from the 1983 rate of 17.3 and was the highest since 1970 when the rate was 18.1.
• General Fertility Rate	In 1984, California's general fertility rate was 72.5 live births per 1,000 women ages 15–44, an increase of 0.8 percent over the 1983 rate of 71.9. The general fertility rate for California in 1984 once again surpassed the 1984 United States' general fertility rate of 66.0. The highest general fertility rate in 1984 was for Kings County (101.9) and the lowest general fertility rate in 1984 was for Marin County (43.2).
• Women of Childbearing Age	The median age of California women of childbearing age (15-44 years) in 1984 was 29.0 years, compared to 28.8 years for the United States.
• Age-Specific Birth Rates	The California live birth rate for mothers under 15 years of age increased 10.0 percent from 1.0 in 1983 to 1.1 in 1984; the rate for women ages 25–29 years increased from 117.4 to 120.6, up 2.7 percent; the rate for women ages 30–34 years increased from 74.4 to 77.2, up 3.8 percent; the rate for women ages 35–39 years increased from 29.2 to 30.4, up 4.1 percent; and the rate for women 40–44 years increased from 5.7 to 6.0, up 5.3 percent. Since 1982, the live birth rates continued their downward trend for women ages 15–19 years and 20–24 years. The 1984 live birth rate for women 45 years and over has remained the same for the third consecutive year.

- Birth Order . . . .

California live birth rates by live birth order varied slightly from 1983 to 1984. The rate for the first live birth order decreased by 1.0 percent from 30.1 in 1983 to 29.8 in 1984; the rates for the second, third, and fourth live birth orders showed increases of 2.2, 2.7, and 2.3 percent, respectively; the rate for fifth or higher live birth orders remained the same.

In 1984, first live birth order rates increased from 1983 for California mothers ages under 15 years and 25–44 years, while decreasing for women ages 15–24 years; second live birth order rates decreased for women ages 20–24 years, while increasing for women ages 25–39 years; third live birth order rates increased for women ages 15–44 years; fourth live birth order rates increased for women ages 20–34 years and decreased for women ages 35–39 years; fifth or higher live birth order rates increased for women ages 25–29 years and decreased for women ages 35–39 years.

FETAL DEATHS . . . .

The number of reported fetal deaths in California increased 2.0 percent from 3,049 in 1983 to 3,110 in 1984.

The 1984 fetal death ratio in California remained the same as 1983 at 7.0 per 1,000 live births.

In 1984, of the 3,110 reported fetal deaths in California, 2,405 (77.3 percent) were of White race/ethnicity of child and 448 (14.4 percent) were of Black race/ethnicity of child.

In California in 1984, of the 3,110 reported fetal deaths, 890 (28.6 percent) were to mothers of Spanish/Hispanic origin.

In 1984, 11.8 percent of all reported fetal deaths in California were to women under 20 years of age; more than one-half (56.8 percent) were to women in their twenties; 18.1 percent were to women ages 30–34; 8.4 percent were to women ages 35–39; 2.3 percent were to women in their forties; and 2.5 percent were to women with age not stated.

INFANT DEATHS

In 1984, there were 4,212 infant deaths in California; the infant death rate reached an all-time low of 9.4 infant deaths per 1,000 live births.

- **Age**

The majority (63.0 percent) of California infants who died in 1984 were less than one month of age.

- **Sex**

In 1984, over one-half (55.8 percent) of all infant deaths in California were males and 44.2 percent were females.

- **Cause of Death**

In California, 23.8 percent of all infant deaths in 1984 was due to congenital anomalies.

"Sudden Infant Death Syndrome" was responsible for 630 California infant deaths in 1984, down from 650 deaths in 1983. The SIDS death rate was 140.8 per 100,000 live births in 1984, down 5.6 percent from the 1983 rate of 149.2.

"Certain Conditions Originating in the Perinatal Period" accounted for 45.0 percent of all California infant deaths in 1984 and was almost the same percent as in 1983 (44.7 percent).

DEATHS

The number of California resident deaths in 1984 was 195,470, an increase of 7,452 (4.0 percent) from 188,018 deaths in 1983.

The 1984 crude death rate of 7.6 deaths per 1,000 population rose slightly from the 1983 crude death rate of 7.5.

- **Sex**

In California, 52.7 percent of the 195,470 deaths in 1984 were males and 47.3 percent were females.

The number of male deaths in California was greater than the number of female deaths in all age groups except 80 years and over.

- **Age-Specific Death Rates**

In 1984, California's death rates were up for the three oldest age groups (65–74 years, 75–84 years, and 85 years and over) and were down for the three youngest age groups (under 1 year, 1–4 years, and 5–14 years). The age group 25–44 years had the largest increase in the death rate, up 6.6 percent, followed by the age group 15–24 years, up 5.2 percent.

- Age-Specific Death Rates (Continued) ....

In 1984, the number of deaths in California from each of the ten leading causes was higher than in 1983; the same was true of the death rates, except "Diseases of the Heart" and "Suicide" which remained the same. The one change in ranking, was that "Diabetes Mellitus" moved ahead of "Homicide" as the ninth leading cause of death.

The greatest percent increase in the number and rate of deaths was for "Chronic Obstructive Pulmonary Disease and Allied Conditions"; the number rose by 12.4 percent to 7,976 and the death rate rose by 10.3 percent to 31.1 per 100,000 population in 1984. The next greatest increase was for "Pneumonia and Influenza"; the number of deaths increased 10.0 percent and the death rate was up 8.4 percent in 1984.

The number one cause of death, "Diseases of the Heart", accounted for 67,691 deaths in 1984, up 1.7 percent from 1983. The second leading cause, "Malignant Neoplasms", rose to 44,992 deaths in 1984, up 4.5 percent from 1983. The first and second leading causes of death combined accounted for over one-half (57.6 percent) of all deaths in 1984.

In 1984, "Accidents and Adverse Effects" was the leading cause of death in California for males ages 1–44 years and for females ages 1–34 years. "Diseases of the Heart" was the leading cause of death for males ages 45 years and over and for females ages 75 years and over. "Malignant Neoplasms" was the leading cause of death for females ages 35–74 years.

During 1984, in California, deaths from violent causes ("Accidents and Adverse Effects", "Homicide", and Suicide") accounted for 83.6 percent of all deaths to 15–24-year-old males, 66.8 percent of all deaths to 25–34-year-old males, 68.7 percent of all deaths to females in the age group 15–24 years, and 48.5 percent of all deaths to females in the age group 25–34 years.

In California, in 1984, there were 1,004 deaths from "Congenital Anomalies" and 630 deaths attributed to "Sudden Infant Death Syndrome" to children under one year of age. These two causes of death total 38.8 percent of all infant deaths.

a Rates and ratios are not calculated for fewer than 5 events.

b Fetal death ratios and infant death rates are not calculated for counties reporting fewer than 1,000 live births.

Note: Maternal deaths are those due to complications of pregnancy, childbirth, and the puerperium, *Ninth Revision International Classification of Diseases* 630–676.
Infant deaths are those under 1 year. Neonatal deaths are those under 28 days.
Fetal deaths of 20 weeks or more gestation are required by law to be registered. However, fetal death registration is believed to be incomplete.
Infant death rates and fetal death ratios are per 1,000 live births.
Death and live birth rates are per 1,000 estimated population.

[1] The general fertility rate is the total number of live births, regardless of age of mother, per 1,000 women of childbearing age (15–44 years).

[2] The total fertility rate is the sum of each age-specific live birth rate multiplied by the number of years in the age group (five years in this case).

[3] An age-specific live birth rate is the number of live births per 1,000 women in a specific age group. For women under 15, the rate is calculated using the female population 10–14 years of age, and for women over 44, using the female population 45–49 years of age.

[a] Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states.

[b] Based on a 50 percent sample of births.

[1] The general fertility rate is the total number of live births, regardless of birth order, per 1,000 women of childbearing age (15–44 years).

[a] Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states.

[b] Based on a 50 percent sample of births.

Note: Live births with unknown birth order were distributed proportionally to live births with known birth order, before rates were calculated.

Rates are per 1,000 women aged 15–44 years.

[1] The general fertility rate is the total number of live births of specified birth order, regardless of age of mother, per 1,000 women of childbearing age (15–44 years).

Note: Live births with unknown birth order were distributed proportionally to live births with known birth order before rates were calculated.

Rates are per 1,000 women in a specified age group. For women under 15, the rate is calculated using the female population 10–14 years of age, and for women over 44, using the female population 45–49 years of age.

Rates in brackets exceed the corresponding 1970 rates.

[1] The general fertility rate is the total number of live births, regardless of age of mother, per 1,000 women of childbearing age (15—44 years).

[2] An age-specific live birth rate is the number of live births per 1,000 women in a specific age group. For women under 15, the rate is calculated using the female population 10—14 years of age, and for women over 44, using the female population 45—49 years of age.

a Rates not calculated for fewer than 5 live births.

* The difference between the state and county age-specific birth rates are statistically significant at the 0.05 level of significance.

---

1 All live births with at least one type of congenital anomaly.

2 Each type of congenital anomaly contains only those births with that anomaly.

3 See Figure 2–C, page 200 for definitions of congenital anomaly codes.

4 Birth records with "unknown congenital anomalies" include those that do not state whether or not there are congenital anomalies.

Note: Congenital anomalies which were not detected at the time of birth are not included in this table.

Source: State of California, Department of Health Services, Birth Records.

Figure 2–C

CONGENITAL ANOMALIES CODE DEFINITIONS

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–753).

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

[1] All live births with at least one type of congenital anomaly.

[2] Each type of congenital anomaly contains only those births with that anomaly.

[3] See Figure 2–C, page 200 for definitions of congenital anomaly codes.

[4] Birth records with "unknown congenital anomalies" include those that do not state whether or not there are congenital anomalies.

Note: Congenital anomalies which were not detected at the time of birth are not included in this table.

NA Not available.

[1] Direct method of adjustment to 1960 California single total births by age of mother, excluding age unknown.

[2] Fetal and perinatal death rates are per 1,000 total single births; neonatal and infant death rates are per 1,000 single live births; postneonatal death rates are per 1,000 infants surviving 28 days or more.

[3] Fetal deaths under 20 weeks' gestation are excluded.

[4] Fetal death rates include some induced terminations.

[5] Not strictly comparable to the category "Mexican-American" used in this report for live births and fetal deaths. For method used to classify Spanish, see Robert W. Buechley, "A Reproducible Method of Counting Persons of Spanish Surname," *Journal of the American Statistical Association*, 55:88–97, 1961. Blacks with Spanish surnames included in "Black" race category.

[a] Provisional.

Note: Figure in parenthesis is standard error of rate.

6. SOURCES, QUALITY AND LIMITATIONS OF DATA

VITAL STATISTICS REGISTRATION

History of Vital Statistics Registration

Less than a decade after the formation of California State Government in 1850, a law was enacted requiring the state registration of vital events. The law was repealed in 1860; registration of births and deaths was then done by local offices and was incomplete. Effective statewide registration of births, deaths, and marriages began in California in 1905 when the Bureau of Vital Statistics was established to direct the maintenance of a statewide registration and reporting system. Statewide registration and reporting of births, deaths, and marriages has continued without interruption since that date. California was admitted to the United States Death Registration Area in 1906, to the Birth Registration Area in 1919, to the Marriage Registration Area in 1957, and to the Divorce Registration Area in 1968.

In 1962, a statewide reporting system for divorces and annulments was established. Because the report of final decree contained very few items of information, only a limited index and simple counts by county were available. A more extensive divorce reporting system went into effect in 1966, requiring that initial complaints and final decrees be reported. In 1978 the Legislature sharply reduced the scope of California's marriage dissolution reporting system and in that same year California was dropped from the U. S. Divorce Registration Area. Since 1978, county clerks report to the State Registrar only type of final decree, county case number, spouses' names, and date decree granted. The Family Law Act of 1969, implemented January 1, 1970, removed adversary proceedings, changed the name of the decrees of marital dissolution, and reduced the waiting period from initial filing to final decree.

From 1905 through 1939, a stillbirth required filing both a birth and a death certificate. The birth certificate contained an item requiring the attendant at birth to indicate whether or not the child was born alive. Processing of these birth certificates was exactly the same as for certificates of live birth, except that they were excluded from the live birth tabulations. Beginning in 1940, stillbirths were registered on a Certificate of Stillbirth, which has been known as a Certificate of Fetal Death since 1952.

Registration Systems at Present

In California, the registration of vital events is uniformly governed by statutory provisions set forth in Division 9 of the California Health and Safety Code. The Director of Health Services is the State Registrar of Vital Statistics. Forms, standards, and guidelines are provided by the Office of State Registrar, State Department of Health Services. (See "The Vital Statistics System in California," inside front cover, for further functional definitions.)

Live Birth, Death, and Fetal Death Registration

Births, deaths, and fetal deaths are registered with the local registrar in the county where the event took place. Registration forms are furnished by the State Registrar. Local registrars prepare and maintain copies of original certificates; original certificates are then mailed to the State Registrar, indexed, and filed as permanent records.

The Health and Safety Code names local health officers of approved full-time local health departments as local registrars. Forty-seven of California's 58 counties have approved full-time local health departments. In the 11 counties (Alpine, Amador, Calaveras, Glenn, Lassen, Mariposa, Modoc, Mono, San Benito, Sierra, and Trinity) without approved full-time health departments, local registrars are appointed by the State Registrar.

Each live birth must be registered with the local registrar within ten days following the birth. For births occurring in a hospital, the hospital administrator or designee is responsible for registering the birth. For out-of-hospital births, the physician or other person in attendance is responsible for the registration; if no attendant is present, one of the parents must complete the registration (Health and Safety Code, Division 9, Chapter 3, Article 1).

Each fetal death in which the fetus has advanced to or beyond the 20th week of uterogestation must be registered with the local registrar within five days following delivery, prior to any disposition of the fetus (Health and Safety Code, Division 9, Chapter 4, Article 1). It is the responsibility of the attending physician or the coroner to certify the cause of death. It is the responsibility of the funeral director, or person acting in lieu thereof, to obtain all information other than that in the medical and health section, and to register the certificate.

Each death must be registered with the local registrar within five days after the death occurs, prior to any disposition of the human remains. The persons charged with this responsibility are the funeral director, or person acting in lieu thereof, and the physician in attendance or the coroner (Health and Safety Code, Division 9, Chapter 5, Article 1).

It is the responsibility of the physician last in attendance to complete the medical and health section of the death certificate, including the cause of death. However, in the event that no physician was in attendance within 20 days of the death, or the physician is unable to state the cause of death, the death becomes a coroner's case. In all cases where suicide or homicide is suspected, or where there was an accident or injury, it is the coroner's duty to investigate the death.

Marriage and Marriage Dissolution Registration

There are two types of marriage licenses which may be issued in California, a "regular" license (Civil Code Section 4100) and a "confidential" license (Civil Code Section 4213). Both types of licenses are contained in a three-part form. The forms are furnished by the Office of State Registrar to the county clerks responsible for issuing them. The original portion, Part 1, becomes the marriage certificate after the ceremony has been solemnized.

A regular license may be used anywhere in the State of California while a ceremony performed based upon the issuance of a confidential license may only be performed in the county in which the license was issued. Each marriage must be registered with the local registrar by the person performing the ceremony within 4 days after the solemnization. The county recorder is the local registrar of regular marriages and is responsible for transmitting the Certificate of Registry of Marriage to the Office of State Registrar.

The county clerk is the local registrar of confidential marriages and is responsible for transmitting a copy of the Certificate of Confidential Marriage to the Office of State Registrar. Unlike records of regular marriage, records of confidential marriages are not open to public inspection in the local registrar's office or the Office of State Registrar except upon order of the superior court.

Certificates of Final Decree of Dissolution of Marriage, Judgment of Nullity, or Legal Separation are transmitted to the State Registrar by the county clerk of the county in which the decree was granted.

SOURCES AND QUALITY OF VITAL STATISTICS DATA

Records

Vital statistics records of the State Department of Health Services are the source of data presented in this report. These records include certificates of live birth, death, fetal death, registry of marriage, and reports of marriage dissolution granted.

Births, Deaths, and Fetal Deaths

Certificates of live birth, death, and fetal death that occur out of state are reallocated to the state of residence. In this report, events occurring out of state to California residents are included in tables subtitled "by place of residence." Mortality and natality data have been tabulated by place of residence since 1945; in all years since then, except 1947, reallocated certificates have been included in California residence data.

Reallocation of birth, death, and fetal death certificates to the state of residence has been virtually complete within the United States since 1955. This was made possible by a cooperative program among the states to exchange copies of certificates for nonresident events. There is no reallocation of records for events occurring in foreign countries.

California birth registration is considered to be complete for births occurring in California, and nearly so for out-of-state births to California residents. An extensive study of the completeness of birth registration was conducted by the Bureau of the Census.[7] It found that during a five-year period in the United States, birth registration was 99.2 percent complete.

Death registration is considered to be almost 100 percent complete because a death certificate must be filed before a burial permit is issued. Some underregistration may occur for deaths of children under one year of age, and particularly to children dying in the first day of life.

Though no thorough study of the completeness of California's fetal death registration has been conducted recently, it appears that the legally mandated death registration of fetuses that have advanced to or beyond the 20th week of gestation is not complete. The extent and consistency of such nonreporting is unknown at this time.

California Birth Cohort File

In population research, a cohort is a group of individuals who have experienced the same significant demographic event during a specific period of time (usually a year), and who may be identified as a group at successive later dates by this common demographic experience. Cohort studies enable accurate descriptions of changes occurring in a specific group of individuals over time. The most common and important cohort is a birth cohort, persons born during the same year or years.

Since 1965, the Department of Health Services has linked California's live births and infant deaths on computer tapes to create the California Birth Cohort File. Each cohort consists of records of all the live births and fetal deaths of 20 or more weeks' gestation that occur in a calendar year. The death records of infants in the cohort who die during their first year of life are then matched and linked to their live birth records to complete the California Birth Cohort File. Rates computed from this file are a direct measure of the incidence of infant loss because they represent a follow-up of the mortality experience of a particular group (cohort) of infants from birth to one year of age.

The Birth Cohort File may be used to compute fetal, neonatal, perinatal, postneonatal, and infant mortality rates for a number of characteristics of the mother and child that are only available on the birth and fetal death certificates, such as age of mother, age of father, birth order, place of delivery, trimester prenatal care began, birthweight, gestational age, and race/ethnicity.

Studies have shown that the designation of race/ethnicity for the birth certificate is more accurate than for the death certificate.[8] The Birth Cohort File enables more accurate death rates by race of child, since race for both the numerator and the denominator are taken from the birth certificate information. The category "White Spanish" for race of child in the Birth Cohort data is not strictly comparable to "Mexican-American" used in this report for live births and fetal deaths. The Birth Cohort assignment is made by computer identification of Spanish surname,[9] while for live births and fetal deaths, race of child is generated from mothers' and/or fathers' identification of their own race/ethnicity from multiple-choice lists.

Quality Control Procedures

Because about a million California certificates are processed annually, errors can be introduced into vital statistics data unless provisions are made for appropriate quality control measures. Selected certificate information is key-entered and verified onto computer tapes which are then edited for completeness and accuracy. Finally, a sample of records is reviewed to identify random errors. Error rates in the aggregate are less than one percent, and identified errors are corrected.

Shipley, "A Closer Look at Race Differentials in California's Infant Mortality, 1965--67," ***Health Services and Mental Health Administration Health Reports***, Vol. 86, No. 9: 810–814, September 1971; Frost, F. and Shy, K. K.: "Racial Differences Between Linked Birth and Infant Death Records in Washington State," ***American Journal of Public Health***, Vol. 70, No. 9: 974–976, September 1980.

[9] For method used to classify Spanish, see Robert W. Buechley, "A Reproducible Method of Counting Persons of Spanish Surname," ***Journal of the American Statistical Association***, 55:88–97, 1961. Blacks with Spanish surnames are included in "Black" race category.

Population

Vital statistics provide better measures of health status when they are related to the characteristics of the population. Because human populations vary in size and composition, and the number of vital events that occur depends on both these factors, *rates* or *ratios* are used to make accurate comparisons. These control for population variability by reporting the number of events *per unit of population* (or other standard denominator).

The population data used as denominators for calculating rates of vital events per unit of population are prepared by the Population Research Unit of the California Department of Finance. The data employed include the resident military and civilian populations, as of July 1, for each year.

Quite often the most appropriate and current population denominators are not readily available and modifications must be made to existing population data. To arrive at the most appropriate population estimate with suitable age-sex detail, it was necessary to incorporate the most current county population estimates, which do not provide age-sex detail, with the latest population projections, which do. The projections, for each given year, were brought up or down to match the latest county population estimates. This procedure was followed for the years 1980–1984. Intercensal years prior to 1980 have already been adjusted by the Population Research Unit to reflect the respective censuses and were used as adjusted. This Office revises its population denominators as the population data are revised by the Population Research Unit. For these reasons, care should be taken when comparing rates to earlier publications.

LIMITATIONS OF DATA

Limitations of the data must be recognized before valid interpretation is possible. For vital statistics data, these limitations are related to difficulties in reporting and classifying information and to some underregistration of events. It is necessary to exercise particular caution when evaluating vital statistics trend data because medical concepts, legal codes, definitions concerning vital statistics events, estimates of the population, race, and methods of assigning causes of death change over time.

Cause of Death

One of the most important uses of vital statistics data is the study of trends over time in the number and rate of deaths, by cause of death. Vital statistics trend research yields invaluable information on the health status of the population, and discloses which health and medical programs are succeeding. Even more importantly, studies of cause-of-death trends help identify emerging public health problems, so that remedial strategies can be developed and needed resources focused and applied.

However, vital statistics trend data are complicated by technical difficulties which limit the comparability of data over time. Changes in the method of assigning or coding causes of death are perhaps the greatest concern.

Cause-of-death statistics are derived from the medical certification information reported on the death or fetal death certificate by the attending physician or coroner. The medical certification item on certificates of death and fetal death makes provision for the reporting of three causes of death—immediate, intervening, and underlying—plus additional information related to the cause of death. The cause of death selected for coding and tabulating in this report is the "underlying cause of death," which is generally defined as the disease or injury which initiated the sequence of morbid events leading directly to death.

Causes of death are coded according to the *Ninth Revision International Classification of Diseases (ICD)*, and the *Vital Statistics Instruction Manual Part 2a, Instructions for Classifying the Underlying Cause of Death, 1981*. For the years 1969–1978, the causes of death were coded using the *Eighth Revision International Classification of Diseases, Adapted for Use in the United States (ICDA).*

Since its inception in 1898, the classification of diseases has been revised approximately every ten years. Each of the decennial revisions has produced some break in the comparability of cause-of-death statistics. These discontinuities have complicated the interpretation of trends in cause-of-death statistics over time. To facilitate trend analyses, comparability ratios between consecutive revisions of the *International Classification* may be calculated and applied. Ratios between the *Ninth Revision* and the *Eighth Revision* have not been calculated for California mortality data. However, the National Center for Health Statistics has published comparability ratios between the *Ninth* and the *Eighth Revisions* for deaths in the United States as a whole.[10] For an approximation, the ratios for the United States may be used to adjust California data for comparability between coding by the *Ninth Revision* (1979 to 1984), and coding by the *Eighth Revision* (1969–1978). For comparing the latter to 1960–1968 California deaths, see *Data Matters Topical Report*, "Comparability Between 7th and 8th Revisions, International Classification of Diseases," No. 725-0192-601, March 1976, State of California, Department of Health Services, Center for Health Statistics.

Tabulations of Cause of Death

Deaths by cause are presented in this report in several levels of detail. The table headed "Deaths from Each Cause by Sex and Age" presents the frequency of deaths assigned to each underlying cause of death in the Ninth Revision of the ICD for which there were one or more deaths in 1984. All fourth-digit subcategories are included. This table can be found on the microfiche attached to the inside of the back cover of this report.

Variability of Rates

Vital statistics rates are sensitive to variations in the size of both the numerator (the number of vital events that occurred), and the denominator (the estimated population, or the number of births). For example, in small counties a variation of only a few cases in the numerator can cause a relatively large shift in a rate, while in a large county, it may cause no change at all. Alternatively, a minor revision in the estimate of the population in a small county may cause a relatively major change in a vital rate in that county.

---

[10] NCHS, "Estimates of Selected Comparability Ratios Based on Dual Coding of 1976 Death Certificates by the Eighth and Ninth Revisions of the International Classification of Diseases," ***Monthly Vital Statistics Report***, Vol. 28, No. 11, Supplement, February 29, 1980.

All vital rates previously published for the years 1980 through 1983 which are included in this publication have been recalculated, using revised population estimates. Recalculated rates for some counties may differ from those previously published even more than the statewide rates do.

Rates and ratios based on the number of births, instead of the population, are not subject to variability caused by changes in the size of estimated denominators. However, in small counties, these rates are just as sensitive to small shifts in the numerator as are rates based on the population, since few births occur in counties with small populations, and the denominator is correspondingly small.

Sampling Error and Vital Statistics

The number of births and deaths for an area reported in California's Vital Statistics represents complete counts; as such, they are not subject to sampling error, although they are subject to errors in the registration process. However, when the figures are used for analytic purposes, such as comparison of rates over a time period or for different areas, the number of events that actually occurred may be considered as one of a larger series of possible results that could have arisen under the same circumstances.[11] The probable range of values may be estimated from the actual figures according to certain statistical assumptions. The problem of small frequencies is well presented in the Technical Appendix to "The Vital Statistics of the United States, 1978, Volume I, Natality"[12] and is repeated here.

> "In general, distributions of vital events may be assumed to follow the binomial distribution. Estimates of standard error and tests of significance under this assumption are described in most standard statistics texts. When the number of events is large, the standard error, expressed as a percent of the number or rate, is usually small.
>
> "When the number of events is small (perhaps less than 100) and the probability of such an event is small, considerable caution must be observed in interpreting the conditions described by the figures. Events of rare nature may be assumed to follow a Poisson probability distribution. For this distribution, a simple approximation may be used to estimate the error as follows:

---

[11] National Office of Vital Statistics: "Standard Error of the Age-Adjusted Death Rate" by C. L. Chiang. ***Vital Statistics—Special Reports***, Vol. 47, No. 9, Public Health Service. Washington, DC, August 1961.

[12] National Center for Health Statistics: ***Vital Statistics of the United States, 1978***, Vol. I, DHHS Publ. No. (PHS) 82–1100, Public Health Service, Washington, DC, 1982.

"If N is the number of births and R is the corresponding rate, the chances are 19 in 20 that

"1. The 'true' number of events lies between

$$N - 2\sqrt{N} \text{ and } N + 2\sqrt{N}$$

"2. The 'true' rate lies between

$$\text{``}R - 2\frac{R}{\sqrt{N}} \text{ and } R + 2\frac{R}{\sqrt{N}}$$

"If the rate R corresponding to N events is compared with the rate S corresponding to M events, the difference between the two rates may be regarded as statistically significant if it exceeds

$$2\sqrt{\frac{R^2}{N} + \frac{S^2}{M}}$$

"For example, suppose that the observed birth rate for Area A was 15.0 per 1,000 population and that this rate was based on 20 recorded births. Given prevailing conditions, the chances are 19 in 20 that the 'true' or underlying birth rate for that area lies between 8.3 and 21.7 per 1,000 population. Let it be further supposed that the birth rate for Area A of 15.0 per 1,000 population were being compared with a rate of 20.0 per 1,000 population for Area B which is based on 10 recorded births. While the difference between the rates for the two areas is 5.0, this difference is less than twice the standard error of the difference

$$2\sqrt{\frac{(15.0)^2}{20} + \frac{(20.0)^2}{10}}$$

of the two rates which is computed to be 14.3. From this, it is concluded that the difference between the rates for the two areas is not statistically significant."

Time Periods and Geographic Bases

Before 1947, births and deaths were tabulated by year of registration. In 1947 births were tabulated by year of occurrence, while deaths were tabulated by year of registration. Beginning in 1948, births, deaths, fetal deaths, marriages, and marriage dissolutions have been tabulated by the calendar year in which the event occurred.

From 1949 through 1967, deaths in hospitals, sanitariums, and all other institutions were allocated to the previous residence regardless of the decedent's length of stay in the institution. Since 1968, deaths occurring in hospitals, sanitariums, and other resident institutions have been allocated to the last previous residence, unless the decedent resided in the institution for at least one year. All deaths in penal institutions and mental hospitals are allocated to the previous place of residence regardless of the length of stay in the institution.

Race and Ethnicity

Since 1979, information on the race and ethnicity of the father and mother has been reported voluntarily on the birth certificates. This information was mandatory prior to 1979. The percent of birth certificates with race and ethnicity reported was 96.5 in 1979, 98.3 in 1980, 98.6 in 1981, 99.2 in 1982, 99.2 in 1983, and 99.5 in 1984. The information obtained from the race and ethnicity items on both the birth and death certificates reflects the certificate informant's own responses.

From 1970 to 1977, the race of father and mother on the birth certificate was coded independently, and the race of child was generated from the parents' codes. Starting in 1978 ethnicity was added to the coding scheme. Race and ethnicity of both parents were then used to generate the race and ethnicity of the newborn child. In 1982, the race/ethnicity categories used for births and fetal deaths were changed in order to be comparable with those used with the 1980 Census and hence, differ greatly from the 1981 categories.

In 1981, race/ethnicity was classified into eight categories for statistical analysis purposes: White, Black, Mexican/American, American Indian, Chinese, Japanese, Filipino, and Other. Statistically speaking, these groups were mutually exclusive, that is, an individual birth could be classified in only one of these categories. For example, the reporting of Mexican/American precluded being classified as White or any of the other groups. However, in 1982, the reporting of race/ethnicity and the reporting of Spanish/Hispanic origin were made completely independent of each other. A birth identified as one of the race/ethnicity groups could also be identified as Spanish/ Hispanic origin (Mexican, Puerto Rican, Cuban, and other Spanish/Hispanic); conversely, a live birth identified as Spanish/Hispanic origin would also be identified as one of the race/ethnicity groups. As a result, a number of the live birth and fetal death tables in this report tabulated by race/ethnicity are repeated for Spanish/Hispanic origin.

In order to get comparable race/ethnicity categories for 1981 and 1982, a scheme was designed to recode the 1982 classifications so that live births could be redistributed into the 1981 mutually exclusive categories (Figure A). In regrouping 1982 data to make it comparable with the 1981 classification, whether a Black person is self-identified as Hispanic or non-Hispanic, Black still takes precedence. (Current rules require that the Black race designation always takes precedence over all the other race groups. A birth to a Black parent is always classified as Black regardless of the race/ethnicity of the other parent.)

The regrouping scheme is as follows:

FIGURE A

1982	Regrouped to be Comparable With 1981
White, Mexican/American	Mexican/American
White, Non-Mexican/American	White
Black, Mexican/American	Black
Black, Non-Mexican/American	Black
American Indian, Mexican/American	Mexican/American
American Indian, Non-Mexican/American	American Indian
Chinese, Mexican/American	Mexican/American
Chinese, Non-Mexican/American	Chinese
Japanese, Mexican/American	Mexican/American
Japanese, Non-Mexican/American	Japanese
Filipino, Mexican/American	Mexican/American
Filipino, Non-Mexican/American	Filipino
Other, Mexican/American	Mexican/American
Other, Non-Mexican/American	Other

When comparing the percent distribution of births in 1981 and 1982 on the basis of this recoding scheme, a lack of comparability was found for American Indians. This race category constituted 0.98 percent of all live births in 1982 compared to only 0.51 percent in 1981. It has not been established if this was a real increase or the result of an improvement in the identification of American Indian births. Most likely, it was a combination of the two. In 1982, administrative procedures were implemented that required some hospitals to document American Indian births in order to be compensated for various child care services.

In this report, tabulations of live births distributed by race/ethnicity are based on the categories adopted in 1982 and are not comparable with tabulations for earlier years. Please refer to *Vital Statistics of California, 1982* for tabulations created by using the recoding scheme to allow for comparisons with data for prior years (Tables 7–1 and 7–2 and microfiche).

For purposes of statistical classifications, entries of "Race Not Specified" and "Unknown" on death certificates are included in the mortality data as "White." Also, entries of "Mexican" are classified as "White" in death tabulations because there are indications that the "Mexican" category has been consistently underreported.

Age

The death certificate contains both the age and the date of birth of the decedent; for computer tabulations, the age at death is generated from the difference between the date of birth and the date of death. For infants living less than 24 hours and for other deaths where date of birth is not reported, the stated age is accepted.

Length of Gestation

Length of gestation is calculated for live births and fetal deaths by subtracting the date the last normal menses began from the date of birth. The accuracy of this calculation is contingent upon the mother's recall of her last menstrual period. If only the month and year are given, the day is imputed. If a date is not reported, no calculation is made. The calculation is made in completed weeks of gestation.

CERTIFICATES AND LISTS OF VARIABLES

The vital statistics data presented in this report constitute only a part of the information reported on vital records. Other variables which were processed for births, deaths, and fetal deaths are shown in this section. Tabulations and cross-tabulations for most of these items can be provided for at cost, upon request.

DEFINITIONS

Following is a glossary of technical terms used in this report:

Place of occurrence:	The place where the event occurred (regardless of place of residence).
Place of residence:	The place where a person lives or maintains legal residency. For live births and fetal deaths, the mother's residence is used.

Births

Childbearing age:	Women 15 through 44 years of age.
Fetal death:	A death prior to the complete expulsion or extraction from its mother of a product of conception (irrespective of the duration of pregnancy); the death is indicated by the fact that after such separation, the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. This definition was promulgated by the World Health Organization in 1950 and is set forth in the California Administrative Code, Title 17, Chapter 1, Article 3. If the fetus is of 20 weeks or more gestational age, the death must be registered with the local registrar.
Live birth:	The complete expulsion or extraction from its mother of a product of conception (irrespective of the duration of pregnancy) which, after such separation, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. This definition was promulgated by the World Health Organization in 1950 and is set forth in the California Administrative Code, Title 17, Chapter 1, Article 3.
Total births:	Total deliveries: live births plus fetal deaths.
Live birth order:	The number of live births delivered by this mother including the current birth.
Low birthweight:	A live birth or fetal death weighing less than 2,500 grams (5 pounds, 8 ounces). (Prior to 1979, low birthweight was 2,500 grams or less. This definition complies with a change adopted by the National Center for Health Statistics, beginning with 1979 data.)
Premature:	A live birth or fetal death occurring before the 37th week of gestation.

Deaths

Maternal death:	A death resulting from complications of pregnancy or childbirth.
Fetal death:	(See Births).
Neonatal death:	A death occurring during the first 27 days of life.
Postneonatal death:	A death occurring between the 28th day and the end of the first year of life.
Perinatal deaths:	All fetal deaths of 20 or more weeks' gestation, plus neonatal deaths.
Infant death:	A death occurring during the first year of life.

RATES AND RATIOS

Birth Rates and Ratios

$$\text{Age-specific birth rate} = \frac{\text{number of live births to women in specific age group}}{\text{estimated female population in that age group}} \times 1{,}000$$

$$\text{Fetal death ratio} = \frac{\text{number of reportable fetal deaths}}{\text{total number of live births}} \times 1{,}000$$

$$\text{General fertility rate} = \frac{\text{number of live births}}{\text{estimated female population 15–44 years old}} \times 1{,}000$$

$$\begin{array}{l}\text{Live birth rate}\\ \quad\text{(crude birth rate)}\end{array} = \frac{\text{number of live births}}{\text{estimated total population}} \times 1{,}000$$

Total fertility rate = sum of each age-specific birth rate multiplied by the number of years in each age group (e.g., for 5-year groups, 15–19, 20–24, . . . 40–44, the sum of the birth rates for each age group is multiplied by 5).

Death Rates and Ratios

$$\begin{array}{l}\text{Age-adjusted death rate}\\ \quad\text{(direct method)}\end{array} = \frac{\begin{array}{l}\text{total number of expected deaths in a standard}\\ \text{population (if the persons in this population}\\ \text{had experienced the same age-specific death}\\ \text{rates as the population being adjusted)}\end{array}}{\text{total standard population}} \times 100{,}000$$

$$\text{Age-specific death rate} = \frac{\text{number of deaths in specific age group}}{\text{estimated population in that age group}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

$$\begin{array}{l}\text{Death rate}\\ \quad\text{(crude death rate)}\end{array} = \frac{\text{number of deaths}}{\text{estimated total population}} \times 1{,}000$$

$$\begin{array}{l}\text{Death rate from a}\\ \quad\text{specific cause}\end{array} = \frac{\text{number of deaths from a specific cause}}{\text{estimated total population}} \times 100{,}000$$

Fetal death ratio = (See Births)

Infant death rate

$$= \frac{\text{number of deaths under 1 year of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

Maternal death rate

$$= \frac{\text{number of deaths due to complications of pregnancy and childbirth}}{\text{total number of live births}} \times 10{,}000$$

Neonatal death rate

$$= \frac{\text{number of deaths under 28 days of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

Postneonatal death rate

$$= \frac{\text{number of deaths between 28 days of age and 1 year of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

Perinatal death rate

$$= \frac{\text{number of fetal deaths of 20 or more weeks' gestation, plus neonatal deaths}}{\text{total number of births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

CERTIFICATE OF LIVE BIRTH
MEDICAL DATA SUPPLEMENTAL WORK SHEET
For Hospital Use Only

IF ANY ITEMS 28 THROUGH 32 ON CERTIFICATE OF LIVE BIRTH (FORM VS 10) ARE ANSWERED YES, USE THE CODES INDICATED ON THIS WORK SHEET FOR THE APPROPRIATE ITEM NUMBER.

Item 28. IF CESAREAN SECTION WAS PERFORMED, ENTER APPROPRIATE CODE:

1	Elective* Primary	3	Nonelective Primary
2	Elective* Repeat	4	Nonelective Repeat

* Cesarean section before or at onset of labor.

Item 29. COMPLICATIONS OF PREGNANCY AND CONCURRENT ILLNESSES (Use as many codes as are appropriate)

01	Placental Complications	09	Pulmonary
02	Pre-Eclampsia/Eclampsia/Toxemia	10	Syphilis
03	Hemoglobinopathy	11	Rubella
04	Urinary Tract/Kidney Infection	12	Rh (D) Iso-Immunization
05	Anemia Less Than 10 GM HB	13	Unspecified Uterine Bleeding Not Associated with Labor
06	Transport of Mother From Another Hospital After Onset of Labor	14	Renal Disease
07	Heart Disease/Essential Hypertension	15	Previous Cesarean Section
08	Diabetes	16	Other

Item 30. BIRTH INJURY TO CHILD (Use as Many Codes as are Appropriate)

1	To Brain	3	To Bone or Nerve
2	To Spinal Cord	4	Other

Item 31. COMPLICATIONS OF LABOR AND DELIVERY (Use as Many Codes as are Appropriate)

1	Amnionitis/Sepsis	5	Fetal Distress
2	Hemorrhage Associated with Labor	6	Maternal Blood Transfusion
3	Cephalopelvic Disproportion	7	Postpartum Hemorrhage
4	Breech or Other Abnormal Presentation	8	Transport of Infant to Another Hospital Within 24 Hours of Birth
		9	Other

Item 32. CONGENITAL MALFORMATIONS OR ANOMALIES OF CHILD (Use Codes on Reverse Side of This Sheet)

Do not enter any identification by name or
number of the patient on this work sheet.

CERTIFICATE OF LIVE BIRTH
MEDICAL DATA SUPPLEMENTAL WORK SHEET

Item 32. CONGENITAL ANOMALIES (ICD-9). Circle up to five most important anomalies.

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–753).

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

CERTIFICATE OF FETAL DEATH, 1984

Figure 7–E

CERTIFICATE OF FETAL DEATH
MEDICAL DATA SUPPLEMENTAL WORK SHEET
For Hospital Use Only

IF ANY OF ITEMS 32 THROUGH 36 ON CERTIFICATE OF FETAL DEATH (FORM VS 12) ARE ANSWERED YES, USE THE CODES INDICATED ON THIS WORK SHEET FOR THE APPROPRIATE ITEM NUMBER.

Item 32. IF CESAREAN SECTION WAS PERFORMED, ENTER APPROPRIATE CODE:

1 Elective* Primary
2 Elective* Repeat
3 Nonelective Primary
4 Nonelective Repeat

* Cesarean section before or at onset of labor.

Item 33. COMPLICATIONS OF PREGNANCY AND CONCURRENT ILLNESSES (Use as many codes as are appropriate)

01 Placental Complications
02 Pre-Eclampsia/Eclampsia/Toxemia
03 Hemoglobinopathy
04 Urinary Tract/Kidney Infection
05 Anemia Less Than 10 GM HB
06 Transport of Mother From Another Hospital After Onset of Labor
07 Heart Disease/Essential Hypertension
08 Diabetes
09 Pulmonary
10 Syphilis
11 Rubella
12 Rh (D) Iso-Immunization
13 Unspecified Uterine Bleeding Not Associated with Labor
14 Renal Disease
15 Previous Cesarean Section
16 Other

Item 34. BIRTH INJURY TO FETUS (Use as Many Codes as are Appropriate)

1 To Brain
2 To Spinal Cord
3 To Bone or Nerve
4 Other

Item 35. COMPLICATIONS OF LABOR AND DELIVERY (Use as Many Codes as are Appropriate)

1 Amnionitis/Sepsis
2 Hemorrhage Associated with Labor
3 Cephalopelvic Disproportion
4 Breech or Other Abnormal Presentation
5 Fetal Distress
6 Maternal Blood Transfusion
7 Postpartum Hemorrhage
9 Other

Item 36. CONGENITAL MALFORMATIONS OR ANOMALIES OF FETUS (Use Codes on Reverse Side of This Sheet)

Do not enter any identification by name or
number of the patient on this work sheet.

Figure 7—E (Continued)

CERTIFICATE OF FETAL DEATH
MEDICAL DATA SUPPLEMENTAL WORK SHEET
For Hospital Use Only

Item 36. CONGENITAL ANOMALIES (ICD-9). Circle up to five most important anomalies.

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–753).

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

STATISTICAL INFORMATION AVAILABLE FOR FETAL DEATHS, 1984

VARIABLE	CERTIFICATE ITEM NUMBER
THIS FETUS	
Name (first, middle, last)	1A,B,C
Sex	2
Single, twin, triplet, quadruplet, quintuplet, or more	3A
If multiple birth, birth order	3B
Date of delivery (month, day, year)	4A
Race/Ethnicity of child (determined by race/ethnicity of mother and father)	22,25
Spanish/Hispanic origin (determined by Spanish/Hispanic origin of mother)	26
Birthweight	30
PLACE OF DELIVERY	
Maternity hospital code	5A
Type of hospital	5A
County of occurrence	5D
MOTHER OF CHILD	
Maiden surname	9C
Birthplace	10
Age	11
Race/Ethnicity	25
Spanish/Hispanic origin	26
County of residence	28E
FATHER OF CHILD	
Age	8
Race/Ethnicity	22
Spanish/Hispanic origin	23
MEDICAL AND HEALTH DATA	
Type of certifier	12A
Underlying cause of death	19C
Autopsy	21
Date last normal menses began	29A
Completed days of gestation	4A,29A
Month of pregnancy prenatal care began	29B
Previous deliveries to this mother	31A,B,C,D
Date of last live birth	31E
Date of last termination	31F
Caesarean section	32
Complications of pregnancy	33
Birth injury	34
Complications of labor and delivery	35
Congenital malformations	36
